

Soybean

NCDEX Soybean edged higher on Wednesday to close at 3,793 rupees per 100 kg and climb to 5-week high due to improving demand on forecast on below normal rains in monsoon season by Skymet. Moreover, lower crude soybean oil stocks at port also support soybean prices. USDA in its monthly report forecast output at 109 lt in 2019/20, down 5% compared to last year. As SEA, soymeal exports are revised higher to 13.58 lt, up 14.3% in 2018/19. SEA revised March 2018 exports figures to 2.15 lt which is highest single month exports in last 26 months. As per latest SOPA press release, soybean arrivals for the Oct-Apr period pegged at 81 lt, up by 21.8% on year. Until April, country crushed about 62 lt of soybean compared to 55.5 lt last year for same period. As per SOPA, availability of soybean for crushing, direct use and exports of about 101.8 lt as against 86 lt last year.

CBOT Soybean edged higher on Wednesday mostly on bargain buying from 3-year low levels despite expectation of lower exports and higher planting area in the US. Currently, US raise tariffs on \$200 billion of Chinese goods from 10% to 25% last Friday. Trade tensions are rising, as China plans to raise tariffs on \$60 billion of US goods to counter the US hike from last week. According to USDA data, US soybean export down 5.3% m/m to 48.3 mt in 2018/19. Brazil will be largest soybean producing country in 2019/20 at 123 mt, up 5% on year.

Outlook

Soybean futures expected to trade sideways to higher in coming days on improving crushing demand on expectation on improving meal exports and lower soy oil imports. However, higher production, forecast of normal monsoon and increase edible oil imports might put extra pressure on Oilseeds at higher levels.

RMseed (Mustard seed)

NCDEX Jun Mustard traded in a narrow range and closed flat to close at 3,899 rupees per 100 kg. Currently, prices are sustained near 3,900 levels on hopes of demand coming from China after US imposed fresh tariff. Moreover, reports of nil imports of rapeseed for second consecutive month on April keep domestic crush demand higher. Nafed expected to procure about 20 lt at MSP from various states. USDA increase export forecast of rapemeal to 9 lt from 6.5 lt due to likely exports to China with larger crop and crush.

As per SEA, export of rapemeal in 2018/19 is sharply increased to 10.94 lt (Vs 6.64 lt last year) while for march revised higher to 93,110 tonnes from 50,964 tonnes. However, provisional exports were down about 3.5% y/y in April at 94,462 t compared to 97,891 t last year. MOPA in its May release pegged 29 lt of mustard arrivals compared to 28 lt last year while crushing volumes 9 lt unchanged y/y. USDA revised higher its production forecast for 2018/19 by 21% to 80 lt (Vs 61 lt) in its monthly report.

Outlook

Mustard futures expected to trade sideways to higher on steady demand for meals. However, heavy supplies of new season mustard crop and reports of procurement by the states might keep prices in a range.

Refine Soy Oil

Refined Soy Oil June futures climb to the high of 745.45 rupees per 10 kg on Wednesday but corrected in the late trade to close at 741.1 levels due to cut in tariff by government by 1% and reports of sufficient stocks at port and higher in pipeline. Edible oil in pipeline is highest as on 1st May since October last year.

In a fortnightly notification, Government cut tariff value of crude soy oil by 7 dollar to \$689 per tn for the 2nd half of May.

According to monthly report released by SEA, Soyoil imports down 6% to 2.48 lt in April compared to 2.65 lt last year same month. Overall, imports are higher by 13.3% for the first half of OY 2018/19 (Nov-Apr) at 12.37 lt compared to last year same period. USDA in its monthly report revised higher the consumption to 50 lt in 2018/19 compared to 49 lt in previous month estimates. Consumption will increase to 52 lt in 2019/20.

Outlook

We expect Ref Soy oil to trade higher as International edible oil prices starting to pick up from the lower levels. However, weakness in domestic soybean prices and improved imports of edible may put pressure on prices in coming weeks.

Crude Palm oil

MCX May CPO closed lower on Wednesday due to hefty cut in tariff by government for CPO and RBD. It climb to the high of 530 rupees per 100 kg but slipped lower to close at 522.40.

Currently, CPO prices are about 20% down on year due to higher stocks, weak international prices and higher imports.

For 2nd half of May, tariff value for CPO and RBD Palmolein cut by 23 and 26 dollar to 522 and 556 dollar per ton which is lowest tariff rate in 2019. **According to USDA monthly report, India's palm oil imports in 2018/19 is expected to jump by 20% on year to 105 lakh tonnes due to sharp fall in the prices and lower tariff values.** According to SEA monthly press release, Import of Crude palm oil down 19.2% on year in April at 4.50 lt while import of RBD palmolein up by about 13.7% to 2.38 lt due to lower prices in the international markets.

Malaysian palm edged higher for third consecutive session on Wednesday, supported by good export figures. Malaysian palm oil shipments rose for May 1-15, between 4-15% from the corresponding period last month, according to data from three cargo surveyors. Expectations of higher exports and negative growth for production also supported prices. Palm oil output in May expected to decline. Data from the MPOB last Friday showed April output fell 1.4% from the previous month to 1.65 mt. However, it is the highest for the month since 2015.

Outlook

CPO futures expected to trade sideways to lower today due to higher imports of palm oil and lower tariff. Higher edible oil stocks by 20% compared to last year ports might also pressurizing prices of edible oil.

Chana

NCDEX Jun Chana traded sideways and closed almost unchanged on Wednesday to close at 4,526 rupees per 100 kg. Currently chana prices are consolidating above 4500 levels. However, demand coming from the stockists is keeping prices higher. Higher stocks with the government agencies with more than 16 lt of Chana stored at NAFED warehouse and prospects of good output keeping prices below MSP. In 2018/19, chana output forecast at 103.2 lt in 2nd advance estimated by Government, down 8% on year due to 10% less area. Currently, chana attract 60% import duty since Mar 2018 which restricted imports. Chana, imports are down 84% to 1.71 lt in 2018/19 (Apr-Feb) compared to 11.25 lt last year, while exported are about 2.1 lt compared to 89,316 tonnes last year.

Outlook

Chana futures will trade sideways to lower due to technical corrections from the current levels. However, diminishing stocks with physical traders due to lower imports may support prices in long run. Monsoon progress is also very important for the chana prices.

Cotton / Kapas

MCX cotton edged higher for the second consecutive session to close at 20,980 rupees per bales on reports of below normal monsoon and tracking recovery International prices. Recently, CAI has projected cotton exports at 46 lakh bales compared to 69 lakh bales last year due to higher prices and smaller crop size. With the lower exports and higher imports the closing stock as on September 30, 2019 may increase from 13 lakh bales is estimated by the CCI's Cotton Crop Committee.

USDA in its latest monthly report states that India will be back to number one position in 2019/20 season with projected production of 28.5 million bales. In the current season we see higher imports of about 31 lakh bales due to higher domestic prices there will. In April, cotton prices increased to highest levels in 2019 but now correcting on expectation on higher stocks in as exports have been down.

ICE cotton settled lower on Wednesday due to expectation of lower export demand from China due to trade war. Moreover, Chinese yuan is the weakest vs. the dollar since January, making imports of US cotton more expensive. Meanwhile, the USDA in its monthly report forecast that the production in 2019/20 will be largest in 14 year. World cotton production is expected to grow by 6% on year to 125.5 million bales. USDA projected ending stocks for MY 2019/20 at 6.4 million bales, 1.8 million higher than the year before.

Outlook

Cotton futures may trade under pressure due to expectation of higher supplies in domestic market increase imports, decreased exports. Moreover, weakness in International cotton also bearish for domestic cotton. However, forecast of below normal monsoon and steady demand may keep supporting prices.

Spices (Jeera)

NCDEX Jun Jeera jumped 1.46% to close at 17,775 rupees per 100 kg due to **good physical and export demand for jeera**. India's cumin seed (jeera) output is set to touch 4.16 lakh tonnes for 2019, about 9% higher than the previous year, supported by a sharp jump in production in Rajasthan. **Exports of jeera is up 4.6% on year in February at 10,186 tn compared to 9,736 tn last year while for Apr-Feb period it is up 23.2% at 1.57 lt, compared to last year, according to DGCIS. According to Agmarknet, 79,800 tonnes of Jeera arrived in physical market during April 2019 compared to 30,000 tonnes last year same month. In March 2019, close to 70,500 tonnes of cumin arrived in physical market.**

Outlook

We expect Jeera futures to trade to higher in coming weeks due to improving demand from the bulk buyers. Overall exports demand will play a major role in prices movement as availability is good.

Turmeric

NCDEX Jun Turmeric closed at upper circuit on Wednesday on reports of improving export demand and below normal rains which prompt fresh buy by the market participants. It climb to highest levels in 2019 to close at 6794 rupees per 100 kg. Moreover, government procurement and improving export demand also support prices. As per Commerce Ministry, turmeric exports during the month of February, up 5.6% y/y to 8,454 tonnes (Vs 8,006 t). However, for Apr-Feb period exports are up by 17% at 1.19 lt compared to 1 lt last year for the same period. In 2018/19, production is forecast at 11.5 lt in the 1st advance estimates by the government.

Outlook

Turmeric futures expected to trade positive in coming sessions but higher stocks with traders and farmers is pressurizing prices. Government procurement in some states coupled with improving demand for exports will support price rise.
